

**1 in 5 teens** suffers from some degree of hearing loss. The damage is often noise-related and could have been prevented.

Listening to **just a single song** at full volume with headphones or ear buds could damage your hearing forever.

# ONE SONG

could be too long.

Protect your ears against noise-induced hearing loss by remembering **DRUM**:

- D**ial back your volume to 60% or less
- R**educe your exposure to loud sounds
- U**se hearing protection whenever possible
- M**ake an appointment with an audiologist to get your hearing tested

Keep the music **PLAYING.**

Turn the volume **DOWN.**
